PRODUCT SPECIFICATION SHEET

ARCHITECTURAL TRANSACTION WINDOW ASSEMBLIES

DIAMOND DEFENSE

BALLISTIC TRANSACTION WINDOWS

ONE COORDINATED OPENING. ENGINEERED PROTECTION.

Diamond Defense transaction windows coordinate bullet-resistant glazing, armored storefront framing, shelves, pass-through components and communications as one project-specific protective assembly. Each system is configured around the required protection level, opening conditions, customer workflow, accessibility and architectural finish.

COMPLETE SYSTEM DESIGN

A transaction opening is only as strong as its least-protected component. Glazing, framing, counters, transfer devices, communications and anchorage are coordinated as a complete assembly to reduce gaps between separately sourced products.

ARCHITECTURAL TRANSACTION WINDOW

Representative configuration - project-specific options available

UL 752 LEVELS II - VIII AVAILABLE

B.A.B.S. GLAZING

PROTECTIVE STRUCTURE

ARMORED FRAMING

TRANSACTION HARDWARE

TRAYS & DRAWERS

CLEAR COMMUNICATION

VOICE SYSTEMS

CUSTOM-BUILT TRANSACTION SYSTEMS

PROTECTION BUILT AROUND THE WORKFLOW.

ENGINEERED ASSEMBLY

- Retrofit and new-construction storefront applications
- Single-window or connected multi-station configurations
- Project-specific dimensions, anchorage and protection levels
- Bullet-resistant glazing with B.A.B.S. options available
- Armored storefront framing coordinated with the opening

INTEGRATED OPTIONS

- Laminated or stainless-steel shelves and counters
- Currency trays, pass-through drawers and package exchangers
- Bullet-resistant wired or rechargeable communication systems
- Clear anodized, brushed aluminum, dark bronze and custom finishes

PROJECT COORDINATION

Final performance applies to the specific tested or engineered configuration selected for the project. Glazing, framing, transfer components, communications and anchorage are reviewed as one protective opening.
